DETAILED ACTION

Specification

1. A substitute specification excluding the claims is required pursuant to 37 CFR 1.125(a) because too many changes have been made to the original specification increasing the chance for erroneous amendment entry, arrangement of papers, etc.

A substitute specification filed under 37 CFR 1.125(a) must only contain subject matter from the original specification and any previously entered amendment under 37 CFR 1.121. If the substitute specification contains additional subject matter not of record, the substitute specification must be filed under 37 CFR 1.125(b) and must be accompanied by: 1) a statement that the substitute specification contains no new matter; and 2) a marked-up copy showing the amendments to be made via the substitute specification relative to the specification at the time the substitute specification is filed.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application

Application/Control Number: 09/423,501
Art Unit: 2642

being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 6 – 15 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by An et al.

An et al. teach a system and method for accessing and modifying or administering a subscriber's telephony features, preferences, data, etc. via an Internet access unit 58 or terminal connected to an Internet server, the Internet server being connected to a telephone exchange or switch or central office, etc., and wherein that telephone exchange or switch has a profile repository 14 or database pertaining to the aforementioned features. The terminal may be connected to the Internet server 50 via dial-up modem through a telecommunications network (PSTN 12 for example), or through a LAN (as in a business or hotel when a subscriber is traveling for example) or some type of digital network such as ISDN lines. Furthermore, the terminal could be a personal computer located at the subscriber's premises or furthermore, could just as well be a personal computer located at a service center for a service representative, i.e., human operator, to operate. Lastly, as an alternative to the above system and method, An et al. also teach an exchange configuration wherein the web server 50 is run on one of the service manager nodes 16, connected to switch 62 so that the switch 62 realizes the features and contains the database. (Abstract, Figs. 1 – 12, Col. 2, lines 1 – 26, Col. 3, line 1 – Col. 5, line 34)

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. US Pat 5,883,946 (Beck et al.) teach a method and apparatus for provisioning customized telecommunications service. US Pat 6,091,808 (Wood et al.) teach methods and apparatus for providing telephone call control and information via a web facility. US Pat 6,028,917 (Creamer et al.) teach access to extended telephone services via the Internet.
